

## H323 with H239 (Video and Data)

How to use H239 (Video & Data) from this videoconferencing system.

Newer room and desktop videoconference systems support this standard. Non H-239 systems will see the graphics presentation but not in high resolution or within a separate video window.

For best results use the ECS Ad-Hoc 88X service.

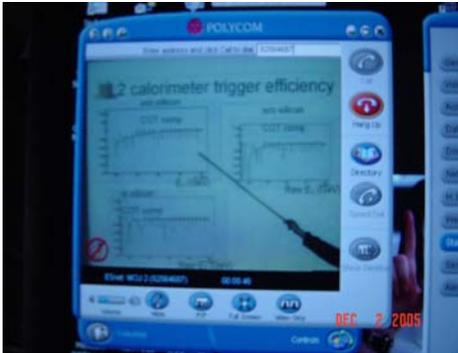

The content will be displayed through the video projector and the video conferencing system once you select the graphics button.

You can start and stop displaying the content by selecting the graphics button
