## Procedures to connect your laptop for display through the FCC2a video projector

➔ You may wish to \*reboot the video system before connecting your laptop to the VGA cable

- 1) Connect the VGA cable to your laptop.
- 2) Turn on video projector using ASK Proxima remote control.
- 3) After warm-up the projector will display a blue Polycom Visual Concert splash screen.
- 4) Press the **Graphics** button on the Polycom remote control. Your laptop will be displayed on the LCD panel and through the video projector.

### Troubleshooting tips:

- You may have to change your laptop video display output by pressing the Function key and a FNumber key.
- If Steps 1-4 do not work reboot the Polycom video system and try again.

#### **\*To Reboot:**

- 1) Disconnect VGA cable from PC
- 2) At Home Screen use down arrow key to highlight "System"
- 3) Press • (center button)
- 4) Type \*911\* using the remote control and the system will reboot

**NOTE:** This VGA connection will also allow you to send and display high resolution content when video conferencing.

See [H323 with H239](#) (Video and Data) for details.
