

February 2009

Procedures to connect your laptop for display through the video projector

- 1) Connect the VGA cable to your laptop.
NOTE: Set your PC resolution to 1024x768
- 2) Turn on video projector using ASK Proxima remote control.
- 3) After warm-up the projector will display a blue Polycom Visual Concert splash screen.
- 4) Press the **Graphics** button on the Polycom remote control. Your laptop will be displayed on the LCD panel and through the video projector.

Troubleshooting tips:

- You may have to change your laptop video display output by pressing the Function key and a FNumber key.
- Your PC resolution should be set to **1024x768**
- If Steps 1-4 do not work reboot the Polycom video system and try again.

To Reboot:

- 1) At Home Screen use down arrow key to highlight "System"
- 2) Press • (center button)
- 3) Type *911* using the remote control and the system will reboot

NOTE: This VGA connection will also allow you to send and display high resolution content when video conferencing.
See [H323 with H239](#) (Video and Data) for details.
