Title: U2311H Date: March 6, 2011

Product Uses: email, surfing, movies

Review: The best monitor so far I ever have. I used for 7 years 17" DELL monitor, never had problem, but it started fading, replaced with this one - "plug and play" system, never had to adjust anything, will recommend everybody, worth every penny.

Good work DELL

Title: Superb monitor. Date: February 23, 2011

Product Uses: colorizing b/w photos

Review: I opened the box and hooked it up without doing any adjustments. It replaced a Dell flat screen of average quality. The new display is brilliant and it makes the rest of the field look like 10 year old products. Not one bad pixel. The view is very good from wide angles, far better than a regular LCD or LED, but for critical work, the user should view it near or close to head on. There is a faint bluish cast when viewing it from more than a 45 degree angle. Not noticeable when viewing a movie or video but when I'm colorizing a b/w photo I stay pretty much in front. The mount is very stable and sturdy and the product looks and feels like first class stuff. Some reviewer said that the colors were garrish. Baloney. Vivid and real are more like it. Anyone doing graphic work where color accuracy is important will find this monitor up to the task and very close to the \$1000 plus monitors. Everyone who has seen this monitor is impressed with it. You will not be disappointed either.

### UltraSharp U2311H 23 inch Monitor Det...

**Review:**

Dell UltraSharp monitors are always at their highest quality. I used to use 17 inches monitor and after I upgraded to this one I will never go back. I can't believe I didn't thought of owning this monitor sooner. It's perfect for gaming but I use it mostly for everyday use and some gaming. Also, I like the fact that it's not widescreen so everything shows up as the way it supposed to. I highly recommend this monitor to anyone.

**Title:**

Ultra Sharp maintains Ultra Quality

Date: February 10, 2011

**Product Uses:**

Gaming, video/movies, image editing, browsing

**Review:**

Upgrading from an Ultrasharp 2005 FPW, I needed quality because that was a fine monitor. The U2311H fits that role perfectly.

It doesn't have the perfect viewing angles that the 2005FPW had which is noticeable when moving to the side of the monitor, but it's only a tint that effects one of the corners of the display.

Getting a USB ports was a must since I was so used to them, and to my surprise there are two on each side of the monitor. One pair on the left side and one pair on the bottom towards the right of the monitor.

Great image quality overall. Being an IPS panel, it's not as fast as some TN panels but there is no noticeable ghosting unless you are REALLY looking for it.

There are only two gripes I have with this monitor. If I have something plugged in to the USB port and turn off the monitor, it also stops powering the USB ports. When my compute goes idle and tries to set the monitor to standby, the screen flashes every couple of seconds and then goes black. This maybe a problem with my videocard or display driver and not the monitor.
